

Spatial Data Modelling

Population Science

Francisco Rowe

2025-10-18

Table of contents

Welcome	3
Contact	4
I Introduction	5
1 Overview	6
2 Environment	7
3 Assessment	8
II Content	9
4 Spatial Data	10
5 Spatial data manipulation and visualisation	11
6 Point data analysis	12
7 Spatial interaction modelling	13
8 Spatial econometrics	14
III Supplement	15
Datasets	16
References	17

Welcome

This is the website for the course: “Spatial Data Modelling for Population Science using R”. The course was designed and is delivered by Professor [Francisco Rowe](#) from the Geographic Data Science Lab at the Department of Geography and Planning from the University of Liverpool, United Kingdom.

Note

A PDF version of this course is available for download [here](#).

Part I

Introduction

1 Overview

2 Environment

3 Assessment

Part II

Content

4 Spatial Data

5 Spatial data manipulation and visualisation

6 Point data analysis

7 Spatial interaction modelling

8 Spatial econometrics

Part III

Supplement

Datasets
